

Network Programming (CMPU3027)

Lab Sheet 3 - (1 Mark)

1. Write program to check the given IP is spam or not? (See lecture-02 slides)
2. Modify the above IP spam program and get the IP from command line instead of giving it manually. The main task is to reverse the IP using any method. The output is shown in the image below.

```
C:\Windows\system32\cmd.exe

E:\javac spamCheck.java

E:\java spamCheck 127.0.0.2
127.0.0.2 is spam
E:\
```

Note: You have to submit the report through Brightspace in pdf or doc format which will contains the java source code and screenshot of program output.
